

Claims Validation — 5-Point Match Engine

Every claim scored against 5 dimensions vs the source promotion · 3 outcome branches by confidence.

01 · 5-POINT MATCH ENGINE — Wiring

02 · 3 OUTCOME BRANCHES

BRANCH 01 · SCORE ≥ 95%
AUTO-APPROVE

- Immediate settlement queue
- ~70% of claims (target)
- Cycle time < 2 hours

BRANCH 02 · SCORE 70-94%
HUMAN REVIEW

- Trade Analyst validates in Salesforce case
- ~22% of claims
- SLA ≤ 48 hours

BRANCH 03 · SCORE < 70%
DISPUTE / RETURN

- Case opened · retailer notified
- Needs more evidence or invalid
- ~8% of claims

Tune threshold with data: lower cutoff → faster settlement but higher over-pay risk. Retrain quarterly.

Settlement Process — Payout Wiring

6-step settlement flow · 3 payout methods · GL posting real-time to ERP.

01 · SETTLEMENT — 6 Steps

STEP 01

Approved queue

Claims with status = Approved · aggregated by customer + fund + period

STEP 02

Pick method

Route by contract terms → Credit Note · Check · ACH · deduction offset

STEP 03

Post to GL

Journal entry → Debit Trade Spend · Credit AP/AR · ERP posting via MuleSoft

STEP 04 · CHECK

CFO batch review

Payment run > \$500K needs CFO sign-off · smaller batches auto-approve

STEP 05

Execute payment

Wire / ACH / credit note issued · confirmation received from bank

STEP 06 · CLOSE

Update balances

Fund.paid += amount · Claim.status = Paid · notify customer + KAM

02 · 3 PAYOUT METHODS

METHOD 01 · ~60% OF PAYOUTS

Credit Note

Applied against future invoices · zero cash movement
Best for: ongoing customers with regular orders

METHOD 02 · ~30% OF PAYOUTS

ACH / Wire Transfer

Cash payment direct to retailer bank
Best for: one-off promos · churning customers

METHOD 03 · ~10% OF PAYOUTS

Deduction Offset

Retailer already short-paid · we accept + close
Best for: pre-agreed contract-based deductions

Cycle time target: approved → paid ≤ 15 business days · Payment accuracy: ≥ 99.5%

Financial Reconciliation — 3-Way Match

Salesforce ↔ ERP ↔ Bank — nightly 3-way tie · exception queue for breaks · SOX-audit trail.

01 · 3-WAY MATCH ARCHITECTURE

Month-end close target: Trade Spend accrual closed by day 3 · unreconciled < 2% of total volume · SOX certification signed

02 · BREAK CATEGORIES + CLOSE CADENCE

TOP 4 BREAK TYPES

- 40% — Timing (claim posted before bank cleared)
- 28% — Amount mismatch (rounding · FX)
- 20% — Reference number missing on bank line
- 12% — Duplicate claim / GL entry

CLOSE CADENCE

- | | |
|---|--|
| Daily
Nightly recon batch | Weekly
Break-review meeting |
| Month-end
Hard close · CFO sign | Quarter-end
SOX audit · external |

SOX 404 controls: All reconciliations attested · trail retained 7 years · quarterly external review

KPI Management — 4-Layer Framework

TPM performance measured across 4 layers · 12 core KPIs · each with target, actual, trend.

01 · 4-LAYER KPI FRAMEWORK

LAYER 04 · STRATEGIC
Trade ROI · Trade % of Revenue · P&L contribution

LAYER 03 · TACTICAL (per promotion)
Promo ROI · Lift % · Incremental \$ · Cost per case · Break-even rate

LAYER 02 · OPERATIONAL (per process)
Approval SLA · Claim cycle time · Settlement accuracy · Deduction match rate

LAYER 01 · FOUNDATIONAL (data quality)
Data completeness · timeliness · plan-vs-actual variance · retailer POS coverage

02 · 12 CORE KPIs · Target vs Actual

KPI	TARGET	ACTUAL	STATUS	TREND (QoQ)
🔥 Trade ROI	≥ 1.5x	1.72x	🟢 On	▲ +0.12x
📄 Promo Break-even rate	≥ 60%	54%	🟡 Below	▲ +2 pp
🕒 Claim cycle time	≤ 30 days	22 days	🟢 On	▼ -4 days
🔄 Auto-match rate	≥ 90%	88%	🟡 Close	▲ +3 pp
💧 Fund leakage	≤ 3%	4.2%	🔴 Miss	▲ +0.5 pp

03 · KPI CADENCE & OWNERSHIP

📅 Daily
Operational · Rep + Analyst

📅 Weekly
Tactical · KAM + Trade Mgr

📅 Monthly
Financial · CFO + Sales VP

📅 Quarterly
Strategic · Exec Team

Rule: Every KPI has 1 accountable owner · target locked in ABP

Promotion ROI — Calculation Wiring

Deterministic formula fed by 4 data streams · classified into 4 outcome bands · fed back to Einstein.

01 · ROI WIRING DIAGRAM

4 DATA STREAMS

ROI FORMULA

$$\text{ROI} = (\text{Incremental Revenue} - \text{Trade Spend} - \text{Cannibalization \$}) \div \text{Trade Spend}$$

Incremental Revenue = Actual Revenue during promo - Baseline projection (Einstein)

SAMPLE — WalMart Q2 TPR

4 OUTCOME BANDS

02 · FEEDBACK LOOP + BENCHMARKS

1. Post-event ROI written to Promotion__c
2. Einstein retrains lift model nightly
3. Next promo's forecast becomes more accurate
4. Learnings surface in scenario planner (ABP)

INDUSTRY BENCHMARKS

- Food & Bev — Median 1.4x · Top-decile 2.1x
- Health & Beauty — Median 1.6x · Top-decile 2.5x
- Household — Median 1.2x · Top-decile 1.9x

TOP ROI FAILURE MODES

1. Cannibalization from sister-SKUs
2. Retailer failed to pass-through discount

Sales Uplift — 3-Phase Time Series

Decompose every promo into 3 phases: pre-buy · lift · post-dip · net incremental is the true measure.

02 · UPLIFT DECOMPOSITION

COMPONENT	% of Gross Lift
New buyer (net new)	35% · GOOD
Basket expansion	20% · GOOD
Brand-switch (competitor)	15% · GOOD
Pantry loading	18% · NEUTRAL
Sister-SKU cannibalization	12% · BAD

TRUE INCREMENTAL RATIO

70%

"Real" incremental (rows 1-3)
Excludes pantry + cannibalization

WATCH-OUTS

Cannibalization > 20% → split promo (see slide on Product Promotions)

Pantry > 25% → extend baseline window for accurate lift

Best promos: ≥ 50% new-buyer share
