

Trade Funds — Anatomy & Data Model

A fund is a scoped bucket of money — governed by 6 attributes, sourced from 3 accrual methods.

01 · FUND ANATOMY — 6 Attributes

ATTR 01 · SCOPE

Owner & Boundary

- Customer / Group / Channel / Region
- Brand / Category assignment
- Owner: KAM · Trade Mgr · Category

ATTR 02 · PERIOD

Time Boundary

- Fiscal year / Quarter / Rolling 12
- Start date · end date · roll-forward flag
- Auto-expire policy on unused balance

ATTR 03 · METHOD

Accrual Rule

- Lump-sum (fixed \$)
- Rate-based (% of gross revenue)
- Volume-triggered (per case sold)

ATTR 04 · CONSTRAINTS

Usage Rules

- Eligible promo types (TPR / Display ...)
- Eligible SKUs / brand allowlist
- Max % per promotion (concentration cap)

ATTR 05 · BALANCE

Real-time State

- Accrued \$ · Committed · Paid
- Available = Accrued – Committed
- Rollup formula fields · read-only

ATTR 06 · GL LINK

Finance Mapping

- GL account · cost center · profit center
- ERP fund code (SAP KOSTL)
- Auto-post journal on state change

Governance: All 6 attributes locked at fund creation · changes require Trade Mgr + Finance approval

02 · FUND __c OBJECT MODEL

ROOT OBJECT

Fund__c

Accrual__c (n)

Source invoice · \$ added · date · GL entry ref

FundAssignment__c (n)

Promotion · % allocated · committed \$

Claim__c (n)

Deduction / invoice · \$ paid · status

AuditLog__c (n)

Every state change · SOX trail · 7-yr retention

SAMPLE FUND STATE — WalMart Q2

\$2.4M

Accrued

\$1.7M

Committed

\$1.2M

Paid

\$0.7M

Available

The diagram illustrates the '01 - ANNUAL CYCLE — 4 Stages' process flow:

- STAGE 01 SET** (Aug-Oct - Top-down envelope) → **STAGE 02 ALLOCATE** (Nov-Dec - Cascade to buckets) → **STAGE 03 MONITOR** (Jan-Dec - Track variance) → **STAGE 04 REFORECAST** (Quarterly)
- A feedback loop from Stage 04 back to Stage 01 is labeled: **Variance data feeds next-year SET stage**.

Below the main flow, three real-time controls are detailed:

- CONTROL 01 Hard Cap** (System blocks commit beyond available balance)
- CONTROL 02 Soft Alert** (Email + Chatter when spend crosses 80% / 95%)
- CONTROL 03 AI Predict Overrun** (Einstein forecasts EOY variance from run-rate)

VARIANCE THRESHOLDS · WHEN TO ACT

- ± 5%** (Green - normal drift)
- ± 5-10%** (Yellow - reforecast needed)
- > 10%** (Red - CFO review + freeze)

Salesforce CG Cloud & TPM — Module 9 & 10 (Fund & Claims + Analytics)

Fund Allocation — Assignment Wiring

4-stage allocation with 3 checks · a promotion may draw from multiple funds using an ordered waterfall.

01 · ALLOCATION FLOWCHART — Promo → Fund

STEP 01
Promo submitted

STEP 02
Find eligible funds

STEP 03
Apply waterfall

STEP 04
Commit reserved

ELIGIBILITY MATCH · 3 filters

 **Scope match**
Fund.customer = promo.customer OR fund is channel-wide

 **Period match**
Promo dates fully within fund period · no overlap

 **Mechanic match**
Promo tactic in fund's allowlist (TPR / Display / ...)

WATERFALL ORDER · draw from most-restrictive fund first

1. Customer-specific fund → then 2. Brand fund → then 3. Channel fund → then 4. Contingency

EXAMPLE — \$650K promo, drawn from 3 funds

FUND	AVAILABLE	DRAWN	REMAINING
1 · WalMart Q2 Fund	\$400K	\$400K	\$0
2 · Brand A Regional Fund	\$180K	\$180K	\$0
3 · Modern Trade Channel Fund	\$1.2M	\$70K	\$1.13M
TOTAL COMMITTED		\$650K	split across 3 funds

02 · GUARDRAILS + REJECT REASONS

CONCENTRATION LIMITS

Max per promo: ≤ 40% of any single fund

Max per customer: ≤ 25% of quarterly fund

Contingency reserve: 5% always held back

TOP REJECT REASONS

40% — Insufficient balance in eligible funds

30% — Promo dates outside fund period

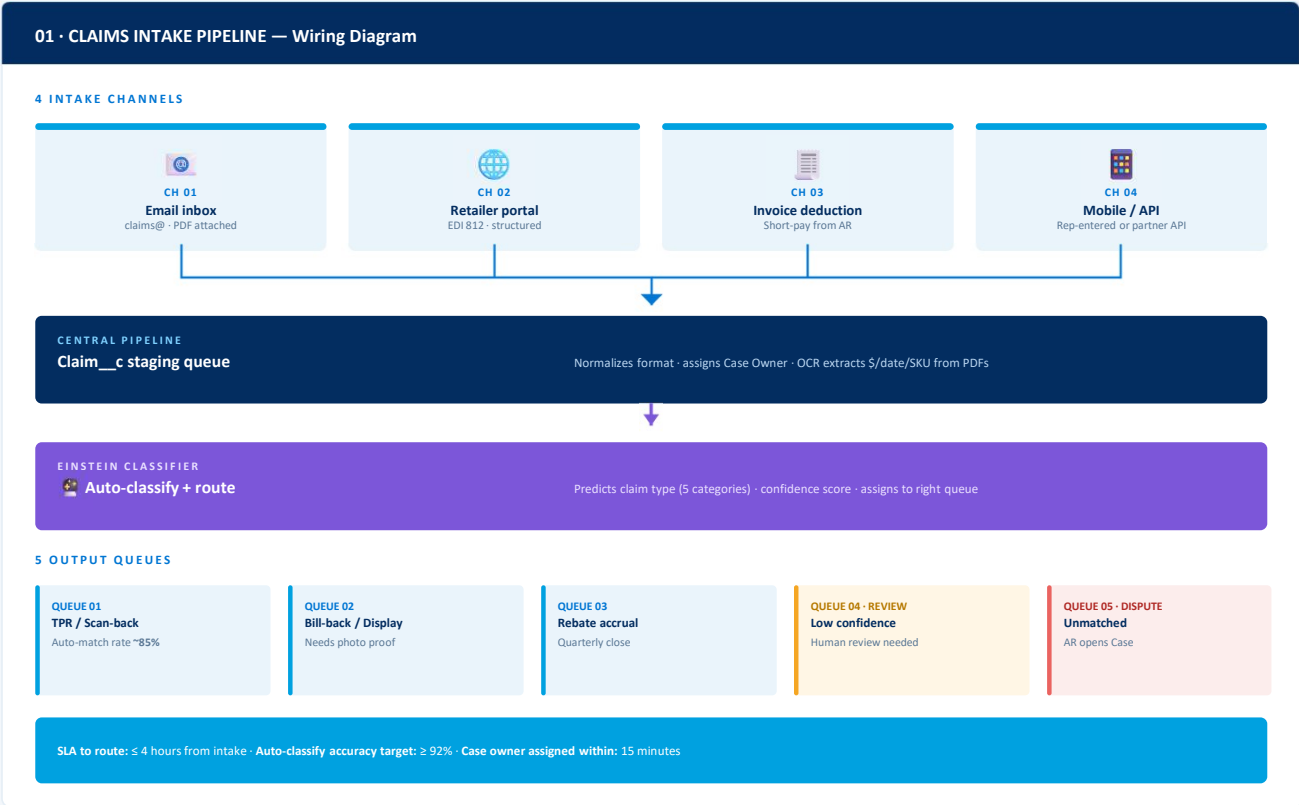

20% — Mechanic not in fund allowlist

10% — Concentration cap breached

Recovery path: System suggests alt funds · KAM can request exception (Trade Mgr approval)

Claims Processing — Intake Pipeline

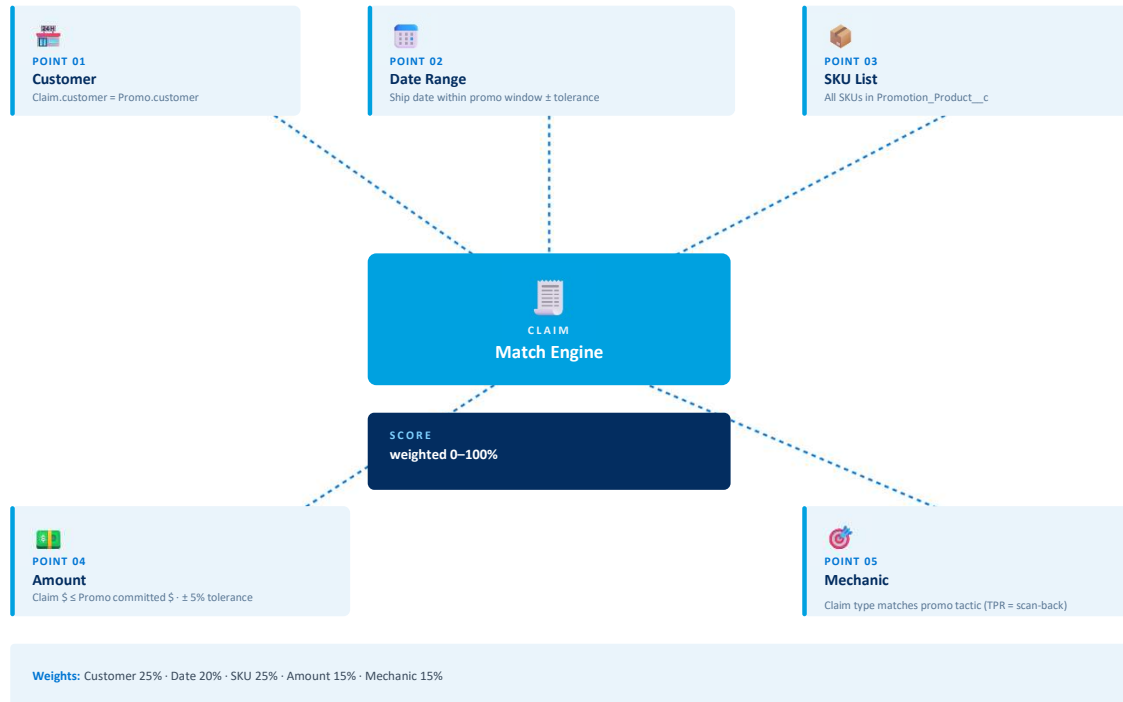

4 intake channels feed a single pipeline · Einstein auto-classifies · every claim gets a route in < 4 hours.

Claims Validation — 5-Point Match Engine

Every claim scored against 5 dimensions vs the source promotion · 3 outcome branches by confidence.

01 · 5-POINT MATCH ENGINE — Wiring

02 · 3 OUTCOME BRANCHES

BRANCH 01 · SCORE ≥ 95%
AUTO-APPROVE

- Immediate settlement queue
- ~70% of claims (target)
- Cycle time < 2 hours

BRANCH 02 · SCORE 70-94%
HUMAN REVIEW

- Trade Analyst validates in Salesforce case
- ~22% of claims
- SLA ≤ 48 hours

BRANCH 03 · SCORE < 70%
DISPUTE / RETURN

- Case opened · retailer notified
- Needs more evidence or invalid
- ~8% of claims

Tune threshold with data: lower cutoff → faster settlement but higher over-pay risk. Retrain quarterly.
