

Trade Spend Management — Money Flow

From accrual to payment — how every trade \$ moves through the system with 3 controls.

01 • TRADE \$ WIRING — 6 Node Flow

3 SPEND STATES AT ANY TIME

■ **Accrued** (available) · ■ **Committed** (reserved to promo) · ■ **Paid** (settled & closed)

3 CONTROL KPIs

≤ 3%

Fund Leakage
Committed but no promo tied

≤ 30 days

Claim Cycle Time
Claim received → paid

≥ 92%

Match Rate
Deductions matched to promo

02 • DEDUCTION RESOLUTION FLOW

STEP 01
Retailer short-pays invoice with deduction

STEP 02 • AUTO
System matches to promo (SKU × dates × \$)

STEP 03 • BRANCH
Match ✓ → close · No match → Case for AR

STEP 04 • CLOSE
Fund debited · promo actual updated · learnings logged

AUTO-MATCH TIERS

✓ **Exact:** \$ + SKU + dates match → auto-close (~70%)

⚡ **Fuzzy:** ± 5% tolerance · needs review (~22%)

✗ **Unmatched:** AR case · manual investigation (~8%)

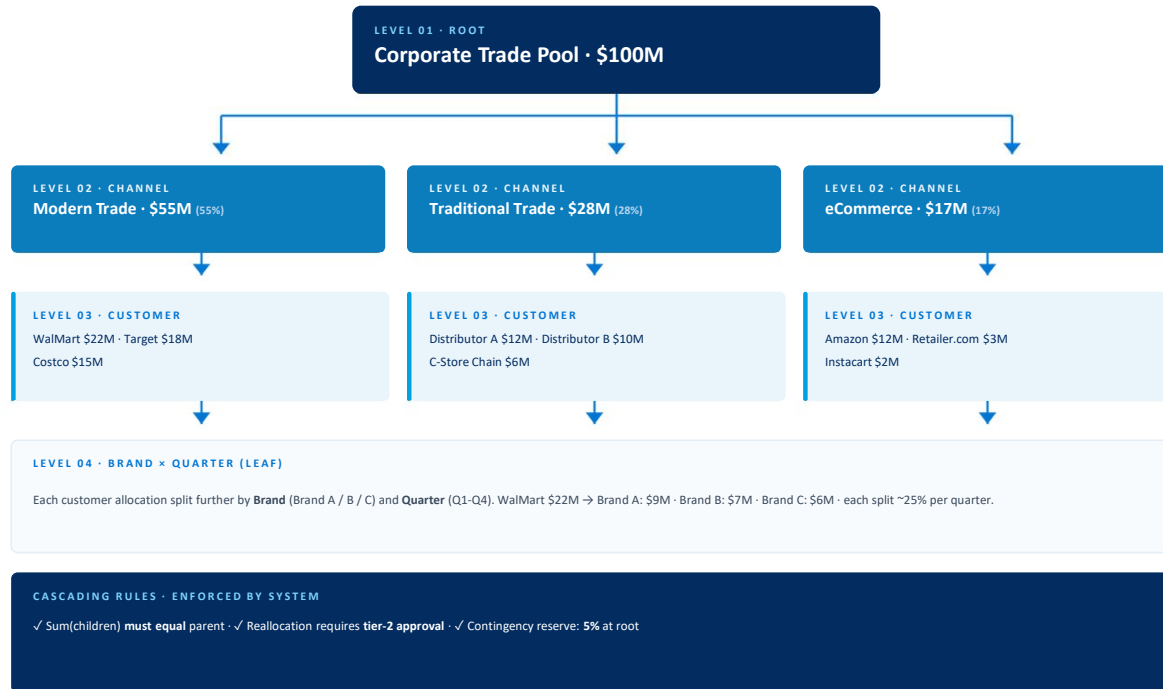

TARGET AUTO-MATCH

≥ 90%

Budget Allocation — Cascading Tree

Corporate \$100M pool → cascaded across 4 dimensions with fixed guardrails at every level.

01 • BUDGET CASCADE — \$100M sample

02 • 5 FUND TYPES

💰 Lump-Sum Fund

Fixed \$ amount reserved for customer / period.
Use: JBP commitments • slotting fees

📊 Rate-Based Fund

% of gross revenue • accrues automatically per invoice.
Use: volume rebates

📄 Scan-Back Fund

Pays only when retailer scans SKU at checkout.
Use: TPR • consumer promos

📄 Bill-Back Fund

Retailer invoices manufacturer • paid on receipt.
Use: display • listing fees

🛡️ Contingency Fund

Reserve (5%) for defensive / opportunistic promos.
Use: competitor response

Reallocation authority: <\$50K KAM • \$50-500K Trade Mgr • >\$500K VP + CFO

Promotion Creation — 7-Step Wizard

Guided wizard from calendar slot to submit — every step validated, ROI simulated live before submit.

01 · CREATION WIZARD — 7 Sequential Steps

STEP 01 · HEADER
Basic Info

Promo name · Customer · Objective (Launch / Volume / Loyalty / Clear) · Fiscal Q · owner KAM.
Validated: customer active · owner has access

STEP 02 · DATES
Date Range

Start date · End date · Buy-in window · Retailer ad break.
Validated: no calendar collision · ≥ 60 days pre go-live (config'able)

STEP 03 · TACTIC
Pick Mechanic

Choose from 8 mechanic families (TPR · Off-invoice · Display · Rebate · BOGO · Coupon · Bundle · Feature).
Multi-select allowed · warns on incompatible combos (e.g. deep TPR + off-invoice)

STEP 04 · SKUs
Product Selection

Assortment filter → tick SKUs · list price · promo price · volume plan per SKU × month.
Validated: SKU active in customer assortment · price ≥ floor

STEP 05 · FUND
Fund Assignment

Pick source fund · % allocated · accrual method (bill-back / off-invoice / scan-back).
Validated: fund balance sufficient · no double-dip on other promos

STEP 06 · FORECAST
ROI Simulation

Einstein predicts Lift % · Incremental \$ · Baseline · ROI · displays scorecard live.
Blocks submit if ROI < threshold OR margin negative

02 · WIZARD SCREEN MOCK

●●● New Promotion — Step 6 of 7 · ROI Simulation

HEADER
Q2 WalMart · Volume Push · TPR + Display

+22%
Lift forecast

\$1.2M
Incremental \$

1.8x
ROI

\$650K
Fund draw

P&L WATERFALL — Baseline vs Promo

Baseline \$5.5M

Promo cost -\$650K

Lift +\$1.2M

Net \$6.05M

STEP 07 · SUBMIT

Passes all validations → routes to Approval workflow (next slide)

Promotion Approval — Routing Flowchart

Auto-route by \$ threshold and risk factors — 4 tiers, deterministic, escalation on SLA breach.

Customer Promotions — Segmentation Block

Customer-scoped promos target one or a segment — 4 targeting modes drive who sees what.

01 • 4 CUSTOMER TARGETING MODES

MODE 01

Single Customer

One named account — 1:1 promotion.

Example: "Walmart Q2 volume push - 12wk TPR"

When: JBP commitments - strategic accounts

- Custom pricing negotiable
- Highest touch - fully custom
- ~70% of top-10 promotions

MODE 02

Customer Group

Pre-built **Account Group** (banner / owner / vertical).

Example: "All Costco warehouse formats"

When: banner-wide rollouts - corp accounts

- Uniform pricing across group
- Auto-syncs when member added
- Fund pooled at group level

MODE 03

Channel-Wide

All customers of one **channel type** (MT / TT / eCom / HoReCa).

Example: "All Modern Trade in Region SE"

When: broad market push - new launch

- Same offer to all in channel - fast rollout

MODE 04 • AI

Dynamic Segment (Einstein)

Rule-based segment auto-refreshed daily.

Example: "Accts with declining share > 5% L3M"

When: defensive - win-back - targeted lift

- Membership shifts as data changes
- Highest ROI - needs clean data

02 • IMPLEMENTATION IN SALESFORCE

DATA MODEL

Promotion.Target__c

Picklist: Single - Group - Channel - Dynamic

Promotion_Account__c (junction - n rows)

Account_Group__c - Account_Channel__c (refs)

Segment_Filter__c (SOQL) - refreshed nightly by Flow

TARGETING RULES

Rule 1: Cannot mix Single + Group targets on same promo — split into 2 promos.

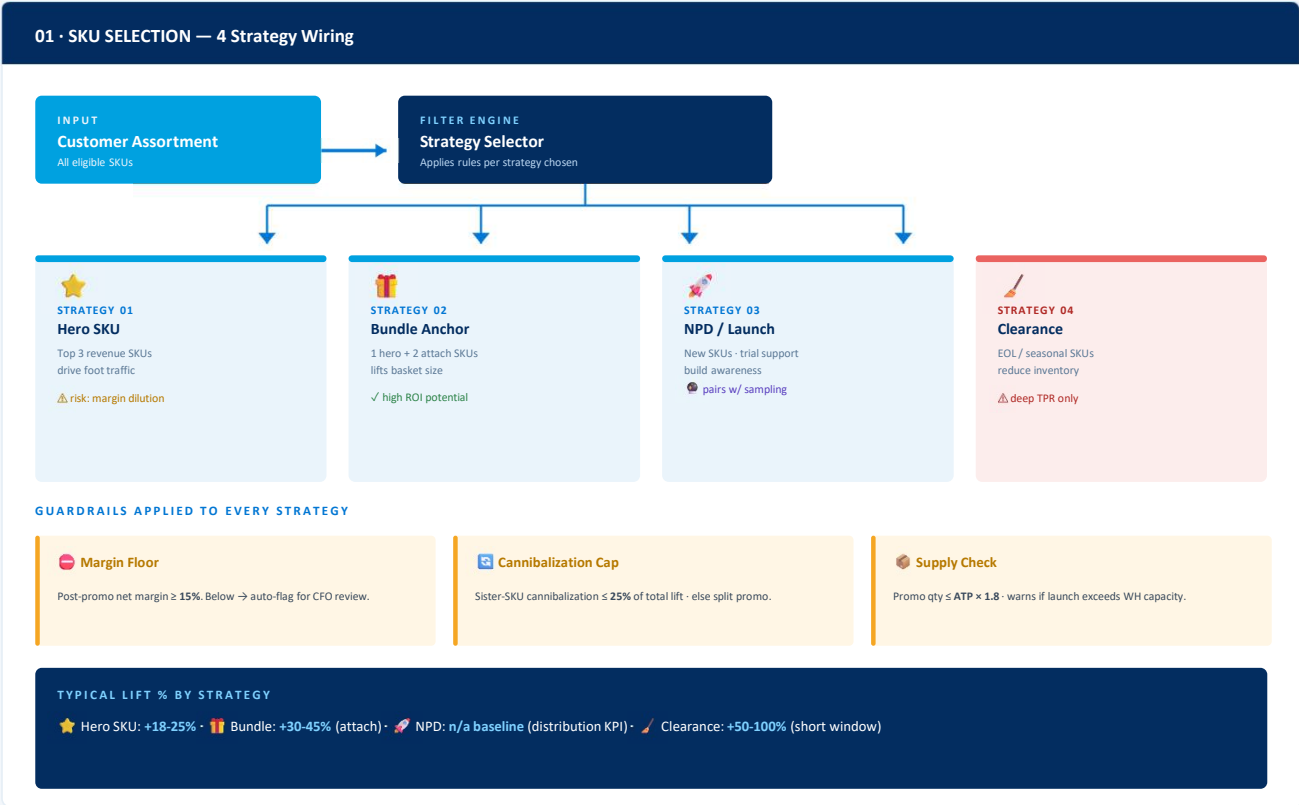

Rule 2: Dynamic segments locked at approval — new members after start get NO promo.

Rule 3: Contract customers use their Contract Price Book instead of Channel.

KPI: ≥ 60% of promos should be Dynamic Segments by Y2

Product Promotions — SKU Selection Wiring

4 selection strategies decide which SKUs get promoted — with strict cannibalization & margin guardrails.

Pricing Promotions — 4 Mechanic Comparison

TPR · Off-Invoice · Scan-back · Bill-back — each moves money differently. Wiring shows where each hits.

01 · 4 MECHANICS × MONEY FLOW WIRING

MECHANIC	MANUFACTURER → RETAILER	RETAILER → SHOPPER	SETTLEMENT
TPR Temp Price Reduction	Invoice at normal wholesale price · no immediate discount at order time	Shelf tag reduced for shopper · retailer absorbs then claims back	Scan-back · pays per verified POS scan · ~30 days after event
Off-Invoice Deducted upfront	Invoice already shows discount applied · net price at time of order	Retailer may or may not pass through · discretionary shopper price	Immediate · deducted at order · no claims needed
Scan-back Per POS scan	Full-price invoice · retailer accrues rebate per unit scanned at POS	Shopper price lower during promo · retailer publishes reduced tag	POS-verified · pays exact units moved · needs data feed
Bill-back Retailer invoices	Full-price invoice · retailer bills manufacturer separately for promo cost	Optional pass-through · common for display fees not price cuts	Invoice-driven · needs contract + proof (photos)

02 · WHEN TO USE WHICH · Decision Matrix

GOAL	BEST MECHANIC	WHY
Guaranteed pass-through	Scan-back	Only pays if retailer actually cuts shelf price
Simple + fast	Off-Invoice	No claims, no matching, no cycle time
Consumer price message	TPR (scan-back)	Shelf tag drives shopper behavior directly
Non-price activity (display)	Bill-back	Ties payment to compliance proof · service-based
Volume push (retailer stock-in)	Off-Invoice	Retailer's cost drops → orders bigger volume

03 · FINANCIAL COMPARISON — \$100K sample

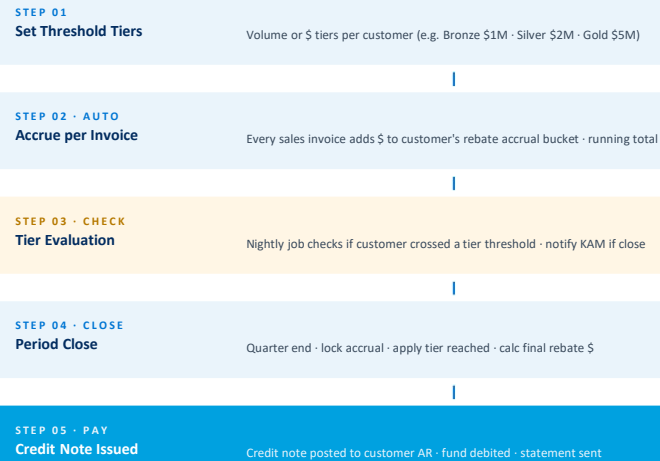

MECHANIC	P&L HIT	CASH-OUT TIMING
TPR	~\$100K	+30 days post-scan
Off-Invoice	~\$100K	Immediate
Scan-back	~\$80-100K	+30-45 days · POS lag

Working capital tip: Off-invoice needs highest cash headroom · Scan-back best for cash-tight quarters

Rebate & Discount Programs

Loyalty via tiered rebates + 6 discount families with clear stacking rules.

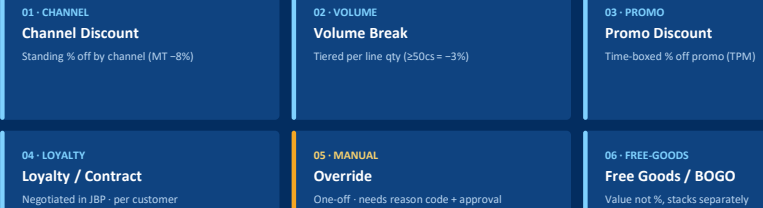

01 • REBATE PROGRAM — Tiered Flowchart

SAMPLE TIER STRUCTURE

02 • 6 DISCOUNT FAMILIES + STACKING

STACKING RULES • WATERFALL ORDER

Additive: Channel + Volume + Promo **combine** on the same line
Multiplicative: Loyalty applied on top of subtotal **after** other 3

Exclusive: Override **replaces** Channel (higher of the two applies) · never stacks

Floor guard: Combined discount cannot drop below `floor_price` · engine caps + logs

Example: \$100 list → Channel -8% → Volume -3% → Promo -5% = **\$84.87** subtotal → Loyalty -1.5% = **\$83.60** net

Display & Bundle Promotions

Physical activation + bundle economics — two high-lift mechanics with distinct execution wiring.

01 · DISPLAY PROGRAMS — Block Diagram

4 DISPLAY TYPES

End-Cap
End of aisle · +15-25% lift

Island Display
Standalone in main aisle · +30-50% lift

Check-out Rack
Impulse zone · +40-60% lift small SKU

Digital Screen
In-store screens · +8-15% lift + brand

EXECUTION FLOW

STEP 01 · CONTRACT
Manufacturer books space with retailer · \$/store/week rate agreed

STEP 02 · BUILD
POSM shipped to stores · retailer team builds display (or rep team on some accounts)

STEP 03 · VERIFY
Rep visits · photo · Einstein Vision scores display presence · compliance flag set

STEP 04 · SETTLE
Retailer invoices for verified stores · finance auto-matches vs compliance · pays via bill-back

DISPLAY KPIs · COMPLIANCE FIRST

 **Compliance rate ≥ 90%** — verified stores / paid stores

 **Photo evidence 100%** — no pay without image

 **Cost per incremental case ≤ \$0.85** (industry benchmark)

02 · BUNDLE PROMOTIONS — Wiring Diagram

3 BUNDLE MECHANICS

TYPE 01
BOGO
Buy X Get Y Free
Same or different SKU

TYPE 02
